

Pentapure Full System Capabilities

Report By Kalp

This document serves as the official, exhaustive audit of the feature set currently delivered within the Pentapure ERP application. It breaks down every capability, permission, module, and report available across all organizational roles.

1. Global & Cross-Departmental Capabilities

These features are deeply integrated into the system and shared across multiple departments to ensure seamless factory operations.

- **Advanced Authentication & Security** – Secure login and session management across all roles.
- **Real-Time Push Notifications** – System-wide, web-based push notifications and alerts to keep staff updated instantly.
- **Notification Center** – Dedicated portal to view, manage, and clear system alerts.
- **Live Global Inventory Tracking** – Real-time visibility into current inventory levels across the entire factory at any given moment.
- **Global Stock Locations** – Ability to view all active warehouses, storage zones, and the exact quantity of stock currently present at each location.
- **Inter-Departmental Stock Transfers** – Capability to log and move physical inventory from one location/warehouse to another.
- **Stage-Specific Product History** – Ability to trace the entire lifecycle and history of a specific product at any manufacturing stage (Raw, Semi-Finished, or Finished).
- **Comprehensive History Reports (PDF)** – A global reporting feature allowing nearly all departments (Raw, Semi, Finished, Sales, Dispatch, Cashier, Attendance) to download

2. Role: ADMIN (Superuser & Management Oversight)

The Admin role is the most powerful tier, possessing unrestricted access to manage master data, oversee all departments, and generate executive-level reports.

Executive & System Oversight

- **Executive Dashboard** – A high-level, real-time summary of all factory operations and metrics.
- **System Activity Logs** – Comprehensive audit trails tracking system-wide activities.
- **Manual Notification Broadcasts** – Ability to manually push custom notifications to specific users or departments.
- **Notification History** – Logs of all system notifications previously sent out.

User & Master Data Management

- **User & Access Management** – Full control to register new users, assign roles, toggle account statuses (enable/disable), and permanently delete users.
- **Master Location Management** – Create new warehouse zones or delete existing ones.
- **Master Product Catalog** – Complete control over the factory catalog. Add new products, toggle their availability, and delete them entirely.
- **Quality Control (Grades)** – Define, create, and manage product quality grades (e.g., Grade A, Grade B) for strict quality assurance.

Advanced Inventory & Purchasing

- **Stock Dashboard** – Complete, unrestricted overview of all factory inventory.
- **Manual Stock Adjustments** – Ability to manually correct stock quantities to account for audits, damages, or losses.
- **Automated Stock Limits** – Configure low-stock warning thresholds and reorder points for raw materials and products.
- **Complete Stock Reports (PDF)** – Generate and download full-factory stock level reports in PDF format for executive review.

- **Purchase Order (PO) Oversight** – View all pending purchase requests from lower departments, with the authority to officially approve or permanently delete them.

Financial & Logistics Oversight

- **Cashier Overview** – Comprehensive visibility into all factory financials and cash flow.
- **Financial Overview Reports (PDF)** – Generate and download high-level financial summary reports.
- **Cashier Audit Logs** – Detailed tracking of every action taken by the Cashier department.
- **Specific Cashier Reports (PDF)** – Download targeted financial reports for individual cashiers.
- **Financial Categories** – Create and manage custom accounting categories (e.g., "Utilities", "Maintenance").
- **Dispatch Activity Monitoring** – Full oversight of all outbound shipping activities.
- **Dispatch Activity Reports (PDF)** – Generate and export comprehensive reports on all shipping and logistics operations.

HR & Attendance Oversight

- **Full HR Access** – Unrestricted mirrored access to the entire Attendance module, including Departments, Workers, Daily logs, and generating HR Reports.

3. Role: RAW (Raw Materials Department)

Responsible for handling the intake of unprocessed materials from external suppliers.

- **Department Dashboard** – Landing page with relevant daily metrics.
- **Inward Stock Logging** – Log the physical receipt of raw materials, which automatically updates the live Raw Stock inventory.
- **Purchase Orders (Requisitions)** – View pending/approved material requests and generate new requests to purchase raw materials.
- **Raw Material History** – View detailed logs of all inward material shipments.
- **History Reporting (PDF)** – Generate and download professional PDF reports of all incoming raw material shipments for vendor reconciliation.

4. Role: SEMI (Semi-Finished / WIP Department)

- **Department Dashboard** – Landing page with relevant daily metrics.
- **Production Logging** – Log the conversion of Raw Materials into Semi-Finished goods. This intelligently deducts from Raw stock and increases Semi stock automatically.
- **Internal Purchase Orders** – Generate internal requisitions or parts orders needed for WIP assembly.
- **Production History** – View logs of all semi-finished batches produced.
- **History Reporting (PDF)** – Generate and download PDF reports detailing WIP production history and efficiency.
- **History Reporting (PDF)** – Generate and download PDF reports detailing WIP production history and efficiency.

5. Role: FINISHED (Finished Goods Department)

Responsible for final assembly, packaging, and making goods ready for sale.

- **Department Dashboard** – Landing page with relevant daily metrics.
- **Final Production Logging** – Log the final production run, seamlessly deducting from Semi stock and increasing live Finished stock.
- **Quick-Product Creation** – Ability to rapidly define a new finished product variation directly from the factory floor to prevent bottlenecks.
- **Internal Purchase Orders** – Request packaging materials or final assembly components.
- **Finished Goods History** – View logs of all finished goods produced.
- **History Reporting (PDF)** – Generate and download PDF reports of final production logs for daily targets and inventory audits.

6. Role: SALES (Sales & Client Relations)

Responsible for revenue generation, client management, and booking orders.

- **Department Dashboard** – Landing page with relevant sales metrics.
- **Sales Order Management** – Create new customer sales orders (which automatically reserves Finished stock) and modify existing pending orders.
- **Client CRM** – Add and manage detailed client and company profiles within the system.
- **Logistics Partner CRM** – Add and manage third-party transporters, couriers, and logistics partners.
- **Manual Stock Adjustments** – Ability to adjust stock levels (crucial for handling client replacements, returns, or reserving specialized stock).
- **Dispatch Notes (PDF)** – Generate and download professional Dispatch Notes (Shipping Slips) to share directly with clients.
- **Sales History** – View a complete log of all past orders and client histories.
- **History Reporting (PDF)** – Generate and download PDF reports of all sales orders for commission tracking and revenue forecasting.

7. Role: DISPATCH (Logistics & Shipping)

Responsible for the physical shipping of goods out of the factory.

- **Department Dashboard** – Landing page with relevant dispatch metrics.
- **Dispatch Logging** – Officially log a sales order as shipped, which permanently deducts it from the live Finished inventory.
- **Lorry Receipt (LR) Management** – Add or update tracking numbers, driver details, and Lorry Receipts for shipped orders.
- **Manual Stock Adjustments** – Ability to adjust stock to account for loading errors, transit damages, or missing items.
- **Dispatch Notes (PDF)** – Generate and download professional Lorry Receipts and Shipping Slips for truck drivers and transit authorities.
- **Dispatch History** – View a chronological log of all outbound shipments

- **History Reporting (PDF)** – Generate and download PDF reports of all outbound shipments for logistics auditing.

8. Role: CASHIER (Finance & Accounting)

Responsible for cash flow, accounts payable/receivable, and the general ledger.

- **Finance Dashboard** – Landing page with daily financial metrics.
- **Transaction Management (CRUD)** – Full capability to create, update, and delete financial records for both income (sales) and expenses (salaries, raw materials).
- **General Ledger** – View the detailed financial balance sheet and ledger of the company.
- **Bill & Invoice Management** – Upload digital copies or photos of physical supplier invoices and expense receipts. View these uploaded bills later or delete them if invalid.
- **Custom Financial Categories** – Create and delete financial classification categories (e.g., "Logistics Costs") to organize the ledger.
- **Transaction History** – View chronological logs of all financial entries.
- **Financial Reporting (PDF)** – Generate and download official PDF transaction reports, receipts, and ledger extracts.

9. Role: ATTENDANCE (Human Resources & Timekeeping)

Operates independently to manage company structure and payroll data.

- **HR Dashboard** – Landing page with workforce metrics.
- **Department Management** – Create, view, and delete organizational departments (e.g., "Welding", "Packaging").
- **Worker Management** – Full capability to add new employees, view their profiles, and remove them from the system.
- **Team & Shift Management** – Organize workers into specific teams, squads, or shifts.
- **Daily Attendance Logging** – Officially log daily punch-ins, punch-outs, and absences. View historic daily sheets.
- **General Attendance Reports (PDF)** – Generate comprehensive PDF reports on the entire workforce's attendance and reliability.
